 8. **Title:** The Role of Social Support in the Development of Intimate Partner Violence
 9. **Abstract:** This study examined the role of social support in the development of intimate partner violence (IPV) among a sample of 100 college students. Results indicated that social support was a significant predictor of IPV, with higher levels of social support associated with lower levels of IPV. The findings suggest that social support may play a protective role in the development of IPV, and that interventions aimed at enhancing social support may be effective in reducing the risk of IPV.
